CRUSHED STONE AND SAND AND GRAVEL IN THE FIRST QUARTER OF 2000

An estimated 292 million metric tons of *crushed stone* were produced and shipped for consumption in the United States in the first quarter of 2000, an increase of 7% compared with the same period of 1999.

The estimated U.S. output of *construction sand and gravel* produced and shipped for consumption in the first quarter of 2000 was 193 million metric tons, an increase of 3.8% compared with the same period of 1999.

The above estimates are based on information reported to the U.S. Geological Survey quarterly sample survey by the *crushed stone* and *sand and gravel* producers. The increases in production of both *crushed stone* and *construction sand and gravel* are again mostly due to the continued high level of activity in commercial, public, and private construction work during the first quarter of 2000. It should be noted that in the first quarter of 2000 there was also an increase of 6.2% in portland cement consumption, compared with the same period of 1999.

The USGS quarterly survey on domestic production of *crushed stone* and *construction sand and gravel* has become a significant indicator of construction activity at the national as well as State level. This survey is a sample survey that generates production-for-consumption estimates by quarters for each State, except Alaska and Hawaii, and each geographic division, based on information reported voluntarily by a limited number of producing companies. Occasionally, the number of companies reporting in an area varies from quarter to quarter, or previously reported data by some companies are revised. As a result of such changes in the size or the composition of the statistical sample, the estimated quantities for prior quarters are recalculated. The latest release of the Quarterly Mineral Industry Surveys contains the most recent estimated totals and percentage changes and supersedes previously published similar information.

The production-for-consumption estimates for *crushed stone* and *sand and gravel* are generated independently for each State and geographic division, which are treated as separate statistical sample areas. Therefore, some differences may exist between the total for a division and the sum of State totals that are part of the

same geographic division.

The estimated U.S. *crushed stone* sold or used in the first quarter of 2000 increased in most geographic regions, especially the Midwest and South regions, and decreased in the West region. Major increases were recorded in the West North Central (10.3%), the East South Central (9.9%), and the New England (9.4%) divisions.

The leading geographic divisions for the total amount of *crushed stone* sold or used in the first quarter of 2000 were the South Atlantic with 82.1 million metric tons, or 28.1% of the U.S. total, followed by the West South Central with 48.1 million metric tons, or 16.5%, and the East North Central division with 38.5 million metric tons, or 13.2%.

The estimated U.S. *construction sand and gravel* sold or used in the first quarter of 2000 increased in all geographic divisions, except the Mountain division. Major increases were recorded in the West North Central (14.4%), the West South Central (14.2%), and the East North Central (10%) divisions.

The leading geographic divisions for the total amount of *construction sand and gravel* sold or used in the first quarter of 2000 were the Mountain with 40.7 million metric tons, or 21.1% of the U.S. total, followed by the Pacific with 40.5 million metric tons, or 21%, and the East North Central with 28.8 million metric tons, or 14.9%. The estimated totals by quarters for the geographic divisions do not include Alaska and Hawaii.

Despite the increases recorded at the national and regional level, compared with the first quarter of 1999, production-for-consumption of *crushed stone* in the first quarter of 2000 declined in 9 of the 40 estimated States, with the largest decreases occurring in Washington (-20.3%), Oklahoma (-11.7%), Wyoming (-9%), New Hampshire (-8.1%), and Maine (-5.8%). The five leading States in the production-for-consumption of *crushed stone* in the first quarter of 2000 were Texas, Florida, Georgia, Missouri, and North Carolina. Their combined total production-for-consumption represented 35.5% of the U.S. total.

Production-for-consumption of *construction sand and gravel* declined in 16 of the 44 estimated States, with major decreases

occurring in Utah (-46.6%), Vermont (-23.9%), Maine (-13%), Oregon (-13%), South Carolina (-11.8%), and Virginia (-11.8%). The five leading States in the production-for-consumption of *sand and gravel* in the first quarter of 2000 were California, Texas, Arizona, Ohio, and Colorado. Their combined total production-for-consumption represented 41.8% of the U.S. total.

A total of 352 companies representing *crushed stone* and *construction sand and gravel* producers reported production-for-consumption information to the first quarter sample survey. The large participation of the producing companies in this survey is reflected by the high percentage coverage obtained for most

geographic divisions and States. The percentage coverage indicates how much of the total estimated production-for-consumption for a State or a geographic division was actually reported by companies participating in this survey and was used to generate the estimated totals for that particular area.

The percent changes between the estimated production-forconsumption for the current quarter and the same quarter of the prior year included in this report are important indicators of the production/consumption trends occurring in a particular area of the country.

^{1/} Quarterly totals shown are estimates based on a sample survey. Estimated quantities for prior quarters have been recalculated.

^{2/} Data may not add to totals shown because of independent rounding and differences between projected totals by States.

^{3/} All percentage changes are calculated using unrounded totals.

^{4/} Number of companies reporting for the quarterly survey.

^{5/} State not included in quarterly survey.

^{6/} Owing to a low number of reporting companies, no production estimates by quarters were generated.
